

Objective-C (CS 285) This is a beginning course in iPhone/iPad App development. Its goal is to make you familiar with Xcode/iOS paradigm and to teach you how to create simple applications for iPhone/iPad in a hands-on environment. It is a 2-unit course that counts as University elective (not a CS elective) and its prerequisite is CS 215.

Web Development with AJAX (CS 385) This is a 3-unit CS elective. It will include a combination of XHTML, CSS, JavaScript, and PHP within a framework, such as, Ruby on Rail, that is to be proposed by the instructor. I want to emphasize that the choice of the framework has not been made yet. The prerequisite of the course is CS 315. However, if you are an excellent CS 215 student, it might be possible to let you register for it. However, we will make that decision in the Fall once the instructor for the course is known.
